German Patent No. DE 32 18 886 C2: In order to improve an electric bolt welding-on device, which makes possible the welding on of bolts of virtually any length, with a bolt collet chuck which is arranged at one device end and which is displaceable in a motor-driven manner in relation to the workpiece from the loading position into the welding-on position, with a bolt supply duct which extends coaxially in relation to the chuck, and with a stop which is arranged on the workpiece-side in front of the bolt collet chuck, before clamping securely positions accurately in the axial direction in relation to the collet chuck the bolt supplied, and after clamping securely releases the bolt, to the effect that simple and economical manufacturing is possible with an increase of the functional

safety, the bolt collet chuck (3) is limitedly displaceable in a motor-driven manner relative to the bolt stop (4), and also the bolt stop (4) is designed to be, influenced by the bolt collet chuck (3), temporarily displaceable against spring pressure into its bolt release position and the control member which acts on the bolt collet chuck is designed in such a manner that the member, before the advance of the bolt collet chuck, positively closes the latter.

German Patent No. DE 33 02 613: The essence of a method of producing a clamping device for stud welding apparatuses which makes possible an appreciably longer service life of the clamping device than hitherto is that the clamping jaws of the clamping device are made of a tungsten/copper composite material, the basic tungsten material being a porous sponge whose pores are filled with the mechanically readily machineable copper material, and that the wear surfaces are formed by mechanical machining, for example grinding, and the copper material is removed after the mechanical machining of the clamping jaws at their wear surface which encompasses the stud shaft to be welded.

C. ☐ The following additional information is provided for the Examiner's consideration.
